PROFESSIONAL SUMMARY — CYBERSECURITY ANALYST

SOC-focused Cybersecurity Analyst with hands-on experience monitoring, detecting, and responding to security threats across enterprise networks and applications.

Skilled in SIEM-driven log analysis, incident triage, and vulnerability assessment, with a track record of accelerating detection and cutting response times.

Brings a proactive, detail-driven approach to threat identification and remediation, delivering measurable improvements in organizational security posture.

CORE SKILLS

SIEM & Log Analysis | Incident Response & Triage | Threat Detection & Monitoring | Endpoint Detection (EDR) | Network Security | Vulnerability Assessment | OWASP Top 10 | Risk Assessment & Reporting | Linux | Security Auditing

EXPERIENCE

Cybersecurity Analyst - Mcyber Academy

June 2025 – December 2025

- Monitored and triaged daily security alerts across SIEM and endpoint detection tools, applying log analysis and threat-detection techniques to separate genuine incidents from noise — cutting average incident response time by 20% and strengthening the organization's overall security posture.
- Ran vulnerability assessments on internal web applications and infrastructure using Burp Suite, Nmap, and OWASP Top 10 methodology, identifying 15+ security flaws that were remediated before they could be exploited, protecting sensitive company data.
- Supported incident response investigations by analyzing network traffic and system logs to trace attack vectors, helping contain 5 security incidents within SLA timelines and minimizing potential downtime and financial impact.
- Documented findings and authored remediation reports for cross-functional teams, applying risk-assessment and technical-writing skills that accelerated patch prioritization and cut mean-time-to-remediate by 30%.

Penetration Tester (Freelance)

Self-Employed

- Performed vulnerability assessments and security audits for 5+ client web applications, applying OWASP Top 10 methodology and manual testing to identify high-risk flaws, deepening practical understanding of attacker techniques used to inform SOC detection rules.
- Identified 20+ vulnerabilities — including injection, encryption, and race-condition flaws — across client environments, applying findings to sharpen the log-analysis and threat-detection skills used in SOC monitoring.
- Delivered clear vulnerability reports and remediation guidance to development teams, achieving a 100% fix rate on critical findings and reinforcing a proactive, detection-first security mindset.

KEY ACHIEVEMENTS

- Identified an encryption flaw in a college website's authentication system that exposed user credentials in plain text; flagged the issue pre-exploitation, protecting the personal data of thousands of students.
- Discovered a critical HTML injection vulnerability in the customer-service chatbot of a clothing brand, enabling arbitrary script execution; responsibly reported it, preventing potential phishing and XSS attacks on customers.
- Uncovered a race condition vulnerability in an e-commerce platform during a security audit that could have enabled fraudulent, duplicate transactions; reported it before exploitation, safeguarding platform revenue and customer trust.

EDUCATION

Certified Cybersecurity Training *September 2024 – December 2025*

Mcyber Academy

Bachelor of Commerce (B.Com) *July 2023 – July 2026*

Maharshi Dayanand University

CERTIFICATES

- Network Administrator - Mcyber Academy
- Linux Administrator - Mcyber Academy
- Digital Forensics - Mcyber Academy
- Python Programming Essentials - Mcyber Academy
